FARNAX®-PRELAC

Complete teat preparation before milking

- **Cleaning**
- **Skin conditioning**
- **Sanitizing**

BENIFICIAL ACTIONS

1. **Cleaning**
   Surfactants act uniformly on the soiled teats and remove dirt efficiently
2. **Sanitizing**
   Natural molecule: Lactic acid
   Fast sanitizing action on the skin : 30s contact time with foam or spray application
3. **Teat skin & sphincter conditioning**
   Glycerin conditions and moisturizes teats for improved milking
4. **Faster milking**
   During this preparation oxytocin is being released, which results in a faster milk let-down and shorter milking time.

HYGIENE IS IN OUR GENES

APPLICATIONS

- **By foaming with a foam dip-cup:**
  Prepare a 40% solution: 400 ml Farnax®-Prelac + 600 ml clean water
  Squeeze cup to activate foam

OR

- **By spraying with up-right sprayer**
  Prepare a 10% solution: 100 ml Farnax®-Prelac + 900 ml clean water

In both cases, make sure the teats are covered well.
Wipe the teats after 30 seconds contact time with one paper towel per cow.
